

ANCHOR SONG

The Girl from Ipanema

Antonio Carlos Jobim · Bossa Nova · ~130 BPM

MUSICAL OS

Plogger Ch. 5–6

- Ch.5 Lap Map — physical keyboard on your hands, four tetrachord feels
- Ch.6 Pythagorean Ordering — F–C–G–D–A–E–B and why adjacent keys share 6 of 7 notes
- Heptachord Shift as the bridge to Gb major

HARMONY

Progression #3

- 12-Bar Blues introduced as contrast exercise
- Ipanema harmony: Fmaj7 → G7 → Gm7–C7
- Bridge: Gb major Heptachord Shift
- Deepening inversions through Fmaj7 changes

MELODY

Primary Focus

- 5 Key Notes Framework — First, Last, Highest, Longest, Beat-1
- Tiny Tension Arc — Z1–Z1–Z2–Z1 as the minimum hook engine
- Duration Amplifies Zone — long notes make tension stronger

RHYTHM

Secondary Focus

- Son Clave 3-2 — first introduction
- Bossa nova feel — anticipations on "and" positions
- Rhythm Code positions 2,4,6,8 as lift and forward motion
- Guitar: p-i-m-a fingerpicking + CAGED first look

SPRINT 3 IN THREE SENTENCES

You will learn to hear **why Ipanema sounds magical** — the tonic that floats, the borrowed G7 that creates unease, and the breathtaking Gb major bridge that steps an entire half-step outside before drifting home. You will develop your **5 Key Notes** ear to understand how Jobim shapes melody, and your **Rhythm Code** fluency to feel the bossa nova groove at a physical level. By sprint's end you will play the full verse on your instrument at 100 BPM with authentic feel.

How to use this textbook: Each page is one A4 sheet. Read the Musical OS section first — it gives you the language. Then Melody and Harmony give you the analytical tools. The Song Deep Dive puts it all together. The Rhythm section gives you the physical feel. Play every exercise before moving on. Come back to the Quick Reference Card daily.

Your Hands Are a Keyboard

The Lap Map is the single most powerful silent-practice tool in Plogger. Place your hands **palm-down on your lap**. Your ten fingertips are the white keys. The spaces between fingers are the black keys. This is a fully functional keyboard you carry everywhere.

LAP MAP FINGER LAYOUT					
FINGER (L → R)	LEFT PINKY	LEFT RING	LEFT MIDDLE	LEFT INDEX	BOTH THUMBS
White Key	C	D	E	F	G / A
Space = Black	C#/Db	D#/Eb	—	F#/Gb	G#/Ab

Note: the gap between E and F (no black key) is felt as fingertips touching. The gap between B and C is felt the same way on the right hand.

The Four Tetrachord Feels

A **tetrachord** is a group of four notes spanning a perfect fourth. Each type has a distinct fingertip-spacing pattern — a physical "feel" you can memorize without an instrument.

MAJOR TETRACHORD

W–W–H (whole, whole, half). Example: C–D–E–F.
Feel: two wide gaps, then a close squeeze.

S1 · DISCOVERING — HEAR BEFORE YOU PLAY

Hum C–D–E–F on the piano (or any melody source) until you feel the brightness. Then map it on your lap. Eyes closed — three fingers wide apart, last finger tucked close.

MINOR TETRACHORD

W–H–W (whole, half, whole). Example: A–B–C–D.
Feel: wide gap, close squeeze, then wide again.

S1 · DISCOVERING — HEAR BEFORE YOU PLAY

Hum A–B–C–D on the piano. Notice the darkness compared to major. Find the "close squeeze" in the middle on your lap fingers.

PHRYGIAN TETRACHORD

H–W–W (half, whole, whole). Example: E–F–G–A.
Feel: immediate tight squeeze at the start, then two wide steps.

S2 · PERFECTING — HEAR BEFORE YOU PLAY

Hum E–F–G–A. The half-step opening gives it a Spanish/flamenco flavor. Map it: first two fingers close, then two wide steps outward.

LYDIAN TETRACHORD

W–W–W (all whole steps). Example: C–D–E–F#.
Feel: three consistently wide gaps — even spacing throughout.

S2 · PERFECTING — HEAR BEFORE YOU PLAY

Hum C–D–E–F#. The augmented fourth (tritone) at the top gives this its dreamy, floating quality. Three equal gaps on your lap.

S3 · FLUENT — SPRINT 3 LAP MAP TARGET

Exit Criterion: From any starting note named by a partner, you can form a major or minor tetrachord on your lap within 3 seconds, eyes away from your hands. Practice this on the bus, at a table, anywhere. The instrument is optional — the Lap Map is always with you.

Why tetrachords matter for Ipanema: The F major scale is built from two major tetrachords stacked: F–G–A–Bb (lower) + C–D–E–F (upper). When Jobim shifts to Gb major in the bridge, he's stacking two Gb major tetrachords: Gb–Ab–Bb–Cb + Db–Eb–F–Gb. Feeling each tetrachord on your lap before the shift helps you hear the key change before the chord sounds.

The Spine of All Keys: F–C–G–D–A–E–B

Seven letters. One sequence. This is the order in which notes were discovered by tuning in perfect fifths — each note a fifth above the previous. Memorize it left-to-right.

F

C

G

D

A

E

B

← MORE FLATMORE SHARP →

THE FUNDAMENTAL RULE: ADJACENT NOTES SHARE 6 OF 7		
Move one step right on the spine (e.g., F major → C major): you add one sharp, remove one flat, and keep the other six notes identical. Move one step left: add one flat, remove one sharp, keep six.		
KEY	NOTES	DIFFERS FROM NEIGHBOR BY
Bb major	Bb C D Eb F G A	Bb → B (one note changes)
F major ←	F G A Bb C D E	Our home key for the verse
C major	C D E F G A B	E → Eb (one note changes)
G major	G A B C D E F#	F → F# (one note changes)

The Heptachord Shift — Why the Bridge Feels So Far Away

The bridge of Ipanema begins on **Gb major**. F major and Gb major are *not* adjacent on the Pythagorean spine — they are on *opposite ends*, separated by the entire chromatic space. This means they share **only one note** (approximately). That is why the bridge sounds like you've been teleported.

HEPTACHORD SHIFT — THE BRIDGE IN PLAIN LANGUAGE

F major (verse)

F · G · A · Bb · C · D · E

The E natural (scale degree 7) is your anchor — you feel completely at home.

Gb major (bridge)

Gb · Ab · Bb · Cb · Db · Eb · F

Almost every note has changed. Only the Bb and F survive. Everything else floats free.

The Magic: Jobim lands on Gbmaj7 — one half-step above F — and holds it for *four full bars*. Your ear loses its footing completely. When Gm7–C7 arrives again, the return to F feels like waking from a dream. This is the Heptachord Shift: a move so far out that only the full return can resolve it.

Mode Brightness Along the Spine

Moving right on the Pythagorean spine = brighter modes. Moving left = darker modes.

Lydian

flamenco

Locrian
darkest

S3 · FLUENT — SPRINT 3 PYTHAGOREAN TARGET

Exit Criterion 1: Recite F–C–G–D–A–E–B from memory in under 3 seconds, both forward and backward.

Exit Criterion 2: When asked "what key shares 6 of 7 notes with F major?", immediately answer "C major (up one fifth) or Bb major (down one fifth)."

Exit Criterion 3: Explain in one sentence why the Ipanema bridge feels so dramatic, using the word "Heptachord Shift."

The 5 Key Notes Framework

Every melody can be understood through five structural notes. These notes reveal the intent of the phrase before you analyze a single scale degree.

KEY NOTE	WHAT IT TELLS YOU	IN IPANEMA (VERSE OPENING)
1. First Note	Establishes the zone (Z1–Z4). Opens a question or a statement.	A (scale degree 3 of F) → Zone 1 Sweet. Opens from home.
2. Last Note	Resolved = closed phrase. Open (tension) = phrase continues.	Verse phrases often end on F (1) or C (5) — closed resolution.
3. Highest Note	Melodic peak = emotional peak. Where is it relative to chord?	F (scale degree 1 on Fmaj7) — peak feels like arriving, not straining.
4. Longest Note	Duration amplifies the tension of the zone. Long Z3 = big tension. Long Z1 = deep rest.	The "tall and tan" phrase holds its note — duration = settling weight.
5. Beat-1 Note	Strongest rhythmic position. Z1 on Beat 1 = grounded. Z3 on Beat 1 = urgent.	Ipanema verse lands on Beat 1 with chord tones — rhythmic security.

Tiny Tension Arc — The Minimum Hook

The Tiny Tension Arc is the smallest complete melodic unit that creates tension and resolves it. Four notes or gestures, in this pattern:

Example in F major: Play A (3) → C (5) → D (6) → C (5).
A and C are Zone 1 (chord tones). D is Zone 4 (the "LA note" — 6th degree, context-dependent but mildly dreamy over Fmaj7). C resolves.
This is almost exactly how Jobim opens the Ipanema verse.

S1 · DISCOVERING — HEAR BEFORE YOU PLAY
Exercise 1: On your instrument, find A–C–D–C in F major. Play it slowly. *Hear the arrival at A (home), the confirmation at C, the slight float at D, and the comfortable return to C.* That float on D is all the tension this melody needs to feel alive.

S2 · PERFECTING — HEAR BEFORE YOU PLAY
Exercise 2: Compose your own Z1–Z1–Z2–Z1 arc in G major (G, B, D are Z1; A, E are Z2). Play it over a Gmaj7 chord. Then move it to Dm7 and notice how the same arc changes emotional color — same pattern, different chord = different feeling.

Duration Amplifies Zone

The longer a note lasts, the more its zone quality is amplified. A quick Z3 note creates a passing sting. A held Z3 note creates anguish. A sustained Z1 note creates deep peace.

S3 · FLUENT — SPRINT 3 MELODY EXIT TARGET
Given any 8-bar melody, identify all five Key Notes (First, Last, Highest, Longest, Beat-1). Label the zone of each. Spot the Tiny Tension Arc within the phrase. Do this for the first 8 bars of Ipanema from memory.

Progression #3 — The 12-Bar Blues

The 12-Bar Blues is introduced this sprint as a **contrast exercise** only — to show how predictable harmonic movement differs from Jobim's sophisticated approach. It is one of 14 AMF progressions. Do not conflate it with jazz harmony.

12-BAR BLUES PATTERN (IN C FOR CLARITY)

I	I	I	I	IV	IV	I	I	V	IV	I	V
C7	C7	C7	C7	F7	F7	C7	C7	G7	F7	C7	G7

Pattern: I–I–I–I / IV–IV–I–I / V–IV–I–V. Every chord is a dominant 7th (adds bluesy b7). This is the *most predictable* 12-bar pattern in music — knowing it lets you instantly hear how Jobim departs from convention.

Ipanema Harmony — Verse Analysis

The verse lives in **F major**. But it doesn't use a textbook I–IV–V progression. Jobim creates an 8-bar world with only three distinct harmonic areas.

Fmaj7
F · A · C · E
Bars 1–4 (I)
Pure tonic. 4 full bars of home.

G7
G · B · D · F
Bars 5–6 (borrowed)
V7 of IV — slightly outside. Creates unease.

Gm7
G · Bb · D · F
Bar 7 (ii)
Minor ii chord — soft approach.

C7
C · E · G · Bb
Bar 8 (V7)
Dominant pull back to F.

WHAT THE G7 ACTUALLY DOES

G7 is not the V7 of F (that would be C7). It is the **V7 of IV** — a secondary dominant that briefly points toward Bb major (IV of F), then Jobim redirects with Gm7–C7 back home. This creates a subtle sense of harmonic wandering: you leave home, look toward a neighboring key, and return. Four bars of Fmaj7 make this departure feel dramatic despite lasting only two bars.

Voice Economy Through Fmaj7 Changes

With four bars on Fmaj7, you have time to explore **inversions** rather than re-striking the same voicing. Voice economy means: when changing chord, move the minimum number of voices the minimum distance.

FMAJ7 → GM7: MINIMAL VOICE MOVEMENT

VOICE	FMAJ7 (BAR 7 PREP)	GM7 (BAR 7)	MOVEMENT
Soprano	E (maj7)	F (b7 of Gm7)	+1 half step
Alto	C (5)	D (5 of Gm7)	+1 whole step
Tenor	A (3)	Bb (b3 of Gm7)	+1 half step
Bass	F (root)	G (root)	+1 whole step

Every voice moves by a step or half-step. No leaps. This is voice economy in action.

Full Chord Map

VERSE — F MAJOR (8 BARS, REPEATED)				
BARS	CHORD	FUNCTION	KEY LYRIC SYLLABLE	MELODY ZONE
1–4	Fmaj7	I (tonic)	"Tall and tan and young and lovely..."	Z1 Sweet
5–6	G7	V7/IV (borrowed)	"...goes walking"	Z2 Bitter
7	Gm7	ii (minor)	"...and when she passes"	Z2 Bitter
8	C7	V7 (dominant)	"...each one she passes goes — ahh"	Z3 Tense

BRIDGE — GB MAJOR (8 BARS, THE HEPTACHORD SHIFT)			
BARS	CHORD	FUNCTION IN GB	FEEL
B1–B4	Gbmaj7	I (new tonic, a half-step above F)	Disorienting. Beautiful. Drifting.
B5–B6	B7	V7/V — building tension	Push forward. B7 = tritone substitute of F7.
B7	F#m7	ii of B (or vi of A) — suspended	Neither here nor there. Maximum drift.
B7 beat 3	D7	V7/vi in original F context	Bridge back starting. You feel the pull home.
B8	Gm7–C7	ii–V7 in F major — home cadence	The wake-up moment. F major returns.

6 Moments to Listen For

- 1. THE 4-BAR FMAJ7 FLOAT**

Four bars of pure tonic — almost nowhere else in the standard repertoire stays home this long. Jobim uses it to let the melody breathe without harmonic movement underneath. Notice how the melody still creates tension through **Duration and Zone** alone.
- 2. THE G7 SURPRISE**

After four bars of pure F, the G7 sounds slightly "wrong" — brighter than expected, a bit outside. This is intentional. Jobim borrowed V7/IV to create the harmonic equivalent of a cloud crossing the sun. It lasts two bars, just long enough to unsettle you.
- 3. THE "AHH" ON C7**

The phrase "each one she passes goes — ahh" lands on a Z3 (4th scale degree) over C7. Duration amplifies this tension. The held "ahh" is the most tense moment in the verse. Listen for it to feel like it needs to fall somewhere.
- 4. THE BRIDGE LANDING**

When Gbmaj7 arrives, your ear has no anchor. Every chord tone you expect has shifted a half-step. *Listen for the moment you stop feeling "home."* This is the Heptachord Shift landing.
- 5. THE BOSSA NOVA "LIFT"**

In the bridge, notice the rhythm *pushes forward* — chords anticipate the beat by an eighth note. This is the "and" before beat 1 landing early. That slight rhythmic lean is what makes bossa nova feel like walking in slow forward lean rather than marching.
- 6. THE RETURN TO GM7–C7**

After B7 and F#m7 and D7 — three chords that sound increasingly "lost" — the Gm7–C7 arrives like firm ground under your feet. *This is why Jobim spends so long in Gb.* The longer you drift, the sweeter the return.

Son Clave 3-2 — First Introduction

The **Son Clave** is a 5-note, 2-measure rhythmic pattern that underlies much of Afro-Caribbean music and, through bossa nova, all of Jobim's work. This sprint introduces the **3-2 orientation**: the "3 side" comes first.

3-2 CLAVE — 8-POSITION GRID (TWO BARS)

BAR 1 — "3 SIDE" (3 NOTES)

1 hit	2 —	3 —	4 hit	5 —	6 hit	7 —	8 —
----------	--------	--------	----------	--------	----------	--------	--------

BAR 2 — "2 SIDE" (2 NOTES)

1 —	2 —	3 hit	4 —	5 —	6 —	7 hit	8 —
--------	--------	----------	--------	--------	--------	----------	--------

Positions 1, 4, 6 in bar 1 (the "3") + positions 3, 7 in bar 2 (the "2"). Clap this pattern before playing anything. It is the skeleton upon which bossa nova rhythms hang.

S1 · DISCOVERING — HEAR BEFORE YOU PLAY

Clave Exercise: Play a recording of Ipanema. Clap on positions 1, 4, 6 of bar 1 and positions 3, 7 of bar 2. You will feel the clave either lining up or creating cross-rhythm against the music. The clave is not always stated explicitly — sometimes it is implied by the groove.

RHYTHM CODE POSITIONS 2, 4, 6, 8 — THE LIFT

In the 8-position grid, odd positions (1,3,5,7) are the **beats**. Even positions (2,4,6,8) are the **"ands"** — the off-beats. In bossa nova and all syncopated music, *notes on even positions push the rhythm forward*. They create the feeling of leaning into the next beat.

1 BEAT	2 "and"↑	3 BEAT	4 "and"↑	5 BEAT	6 "and"↑	7 BEAT	8 "and"↑
-----------	-------------	-----------	-------------	-----------	-------------	-----------	-------------

In bossa nova, the bass guitar or piano LH often anticipates beat 1 by playing on position 8 of the previous bar. This "pre-beat" note is what gives bossa nova its forward lean — the feeling of perpetual, gentle motion.

The Bossa Nova Feel — "Anticipations on And"

BORING (STRAIGHT TIME):

1 ♪	2	3 ♪	4	5 ♪	6	7 ♪	8
-----	---	-----	---	-----	---	-----	---

All notes on downbeats. No forward motion. Sounds like a metronome.

BOSSA NOVA (ANTICIPATIONS):

1 ♪	2	3	4 ♪	5	6 ♪	7	8 ♪
-----	---	---	-----	---	-----	---	-----

Notes on positions 4, 6, 8 anticipate the next beat. The music leans forward constantly.

S2 · PERFECTING — HEAR BEFORE YOU PLAY

Bossa Pattern Exercise: On piano, play Fmaj7 in RH as whole note. In LH, play F on beat 1, then E (b7 idea) on position 6, then C on position 8 (anticipating the next bar). *Hear the "lean" created by the anticipation.* This is the basic bossa LH motion. Then add the RH melody on top.

S1 · DISCOVERING — GUITAR FINGERPICKING PATTERN: HEAR BEFORE YOU PLAY

Guitar (p-i-m-a pattern): p = thumb (bass string), i = index, m = middle, a = ring finger. On Fmaj7 barre chord: *p* on beat 1 (bass F), then *i-m-a* arpeggiate strings 4-3-2 on the "and" positions. Hear this pattern on a bossa nova recording before attempting it — the right hand must feel *loose and circular*, never tense.

No New Voicings This Sprint — Going Deeper

Sprint 3 introduces no new voicing types. Instead, you will **deepen inversions** using the Fmaj7 changes as material. The principle: when you already know the notes of a chord, true mastery means moving through all four inversions fluidly, choosing the one that best connects to the next chord by voice economy.

FOUR INVERSIONS OF FMAJ7 — SIDE BY SIDE			
INVERSION	BASS NOTE	NOTES (LOW → HIGH)	USE WHEN
Root Position	F	F · A · C · E	Opening statement. Establishing the tonic firmly.
1st Inversion	A	A · C · E · F	Floating, less settled. Good for inner bars where motion is implied.
2nd Inversion	C	C · E · F · A	Slightly ambiguous, dreamy. Connects smoothly to Gm7 (C is common tone).
3rd Inversion	E	E · F · A · C	Very unstable in bass. Creates forward motion — E wants to move up to F or down to D.

S2 · PERFECTING — HEAR BEFORE YOU PLAY

Inversion Exercise: Play Fmaj7 in root position. *Hear it settle.* Then play 1st inversion — notice it feels less anchored. 2nd inversion — dreamy. 3rd inversion — feels unstable, like it needs to go somewhere. Now play: Root → 3rd inversion → Gm7 root position. *The 3rd inversion creates a natural "lean" into the Gm7.* This is voice economy in practice.

Voice Economy Rule: Choose the inversion that minimizes total voice travel. Fmaj7 2nd inv (C–E–F–A) → Gm7 root (G–Bb–D–F): each voice moves ≤2 half-steps — average 1.5. That is efficient voice leading.

Guitar: CAGED System — First Exposure

CAGED names the five barre chord shapes (C, A, G, E, D). This sprint you only need to know Fmaj7's two primary positions:

FMAJ7 — "E-SHAPE" BARRE (1ST FRET)

Index barre across fret 1. Middle finger fret 2, string 3. Ring finger fret 3, string 5. Pinky fret 3, string 4. *The "E shape" moved up one fret.* This is the primary bossa nova Fmaj7 voicing.

S1 · DISCOVERING — HEAR BEFORE YOU PLAY

Before fingering the chord, hum F–A–C–E on piano. Then form the shape with your fretting hand. *Play each string separately* to check clarity before strumming.

FMAJ7 — "A-SHAPE" BARRE (8TH FRET)

Barre fret 8. Ring finger barre fret 10 (strings 2–4). Leave string 1 open (E = maj7 of F). *Higher register, brighter sound.* This is CAGED's A-shape for F.

S2 · PERFECTING — HEAR BEFORE YOU PLAY

Play the E-shape version, then the A-shape version. *Hear how the same chord voicing sounds darker lower, brighter higher.* This is what CAGED gives you: the same chord family across the entire fretboard.

Piano: Alberti Bass Introduction

The **Alberti bass** breaks a chord into low–high–mid–high (root–5th–3rd–5th). For Fmaj7: F–C–A–C. It creates implied motion even staying on one chord for four bars — exactly what you need for the Ipanema verse.

Beat 1 F (root)	Beat 2 C (5th)	Beat 3 A (3rd)	Beat 4 C (5th)
-----------------------	----------------------	----------------------	----------------------

S1 · DISCOVERING — HEAR BEFORE YOU PLAY

Hum F–C–A–C as a descending-then-rising pattern before playing. Then place LH fingers on these notes and play slowly. *Notice how the pattern implies the chord without any RH help.* Add the Ipanema melody in RH over the top.

MUSICAL OS — PLOGGER

- **Lap Map:** Fingers = white keys, spaces = black keys. Palm-down on lap.

Sprint 3 Exit Milestones

LAP MAP

Form any major or minor tetrachord from any starting note by finger feel, eyes away, within 3 seconds.

PYTHAGOREAN ORDERING

Recite F–C–G–D–A–E–B instantly. State that adjacent keys share 6 of 7 notes. Explain the Gb bridge as a Heptachord Shift.

5 KEY NOTES

Analyze any 8-bar melody for First / Last / Highest / Longest / Beat-1 notes and label each note's zone.

TINY TENSION ARC

Compose and play Z1–Z1–Z2–Z1 motifs in both F major and G major. Understand why the arc resolves.

GIRL FROM IPANEMA

Play the full verse on your instrument with bossa feel at 100 BPM. Recognize the Gb bridge by ear as a key shift.

SON CLAVE

Clap the 3-2 Son Clave pattern over a recording without losing the pattern for 8 bars straight.

Sprint 3 North Star:

"Jobim didn't go to Gb major because it was theoretically interesting. He went because it was the farthest place he could travel and still make it home in time for the melody to arrive. That is the job of harmony: to make the return feel inevitable."
