

MELODY × HARMONY CONVERGENCE

How AMF stability and Voicings OS tensions combine to create emotional intensity

FOUR CONVERGENCE TYPES — WHEN BOTH SYSTEMS PULL THE SAME DIRECTION

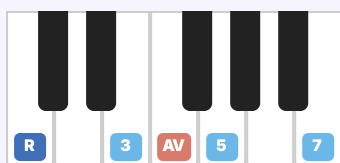

AMF: UNSTABLE + VOICINGS: AVOID NOTE

MAXIMUM DISSONANCE

The melody note is inherently unstable in the key AND clashes with the voicing. Both systems push in the same direction — away from resolution. Every listener leans forward.

Example: FA (rank 7) over Cmaj7

FA is the most unstable scale degree in C major AND it's the avoid note (4th) on Imaj7. Both AMF and Voicings OS say the same thing: get out.

Use: Single beats only. Resolve immediately down to MI for maximum release. Don't sustain.

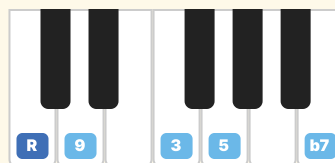

AMF: UNSTABLE + VOICINGS: CHORD TONE

CAUGHT BY THE CHORD

The melody note is inherently unstable — it wants to move. But the chord claims it, providing harmonic support. Creates forward motion without collapse. The tension has direction and a container.

Example: RE (rank 5) as 5th of G7

RE naturally yearns and searches, but G7 holds it as a chord tone. The instability is real, but the harmonic floor is solid underneath.

Use: The workhorse of tension. Most hook melodies live here — yearning but controlled. Sustain freely; resolve when dramatically right.

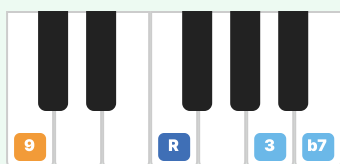

AMF: STABLE + VOICINGS: AVAILABLE TENSION

STABLE NOTE AS COLOR

The melody note is harmonically stable in the key, but it's not a chord tone — it floats above the harmony as an available tension. Stability prevents harshness; non-chord-tone status adds modern color. Expressive without risk.

Example: DO (rank 1) as 9th of Bb7 (bVII7)

DO is the most stable note in C major, but over borrowed Bb7 it floats as a lush 9th tension. Open, expansive, modern.

Use: Jazz color and extended harmony. Soul and R&B writers use this constantly on borrowed chords. Sustain freely — the stability prevents harshness.

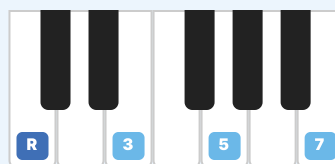

AMF: STABLE + VOICINGS: CHORD TONE

PURE ZONE 1 — HOME

Both systems agree: this note is exactly where it belongs. Maximum emotional resolution and sweetness. The "arrived" feeling. When the melody and harmony both say "home," the listener exhales.

Example: SO (rank 2) as 5th of Cmaj7

SO is stable in the key (rank 2, "strong") and a chord tone in the voicing. Both systems pull toward rest.

Use: Chorus endings, final resolutions, moments of earned peace. The note that closes a phrase without question marks.

The intensity of any melodic moment comes from **how aligned or opposed these two systems are**. When both say "tension" — the listener holds their breath. · When both say "home" — they exhale.
