

MODAL INTERCHANGE ZONE SHIFTER

How borrowing a chord recolors the emotional zones of the melody notes landing on it

Harmony OS teaches why you borrow a chord. **AMF** shows you what that borrowing does to your melody. This sheet connects the two: for each borrowed chord, see exactly how zone placement shifts for the most common melody notes. The note doesn't change. The chord changes. The emotional color changes completely.

bVIma**j7** (Abmaj7 in C)
HARMONY From Parallel Minor (C Aeolian) — the VI chord of c minor

Characteristic Shift: **Stable → Floating · "Turns grounded notes expansive"**

NOTE	OVER IMAJ7	OVER BVIMAJ7	SHIFT
DO	Zone1 CT · Root · Grounded	Zone3 NCT · 9th · Floating	Home → Open & Wide
MI	Zone1 CT · 3rd · Sweet	Zone2 NCT · #11 · Pensive	Sweet → Pensive
SO	Zone1 CT · 5th · Open	Zone1 CT · 7th · Stays grounded	No shift — still secure
LA	Zone3 NCT · 13th · Colorful	Zone1 CT · Root · Lands	Float → Lands firmly
Use when: You want a phrase to suddenly feel wide open. The "Kiss from a Rose" effect — familiar notes suddenly become expansive. Works beautifully after a grounded verse moment.			

iv-7 (Fm7 in C)
HARMONY From Parallel Minor — iv minor replaces IV major

Characteristic Shift: **Major tones → Zone 2/4 · "Adds melancholic weight"**

NOTE	OVER IMAJ7	OVER IV-7	SHIFT
DO	Zone1 CT · Root	Zone1 CT · 5th · Stable, stays	No shift — both stable CT
MI	Zone1 CT · 3rd · Sweet	Zone4 NCT · maj7 · Bitter	Sweet → Bitter edge
SO	Zone1 CT · 5th · Open	Zone2 CT · b3rd · Minor-tense	Open → Dark & Tense
LA	Zone3 NCT · 13th · Colorful	Zone2 CT · 3rd · Minor weight	Float → Heaviness
Use when: You need melancholy and emotional weight without full darkness. The soul ballad chord. MI becomes dangerous here — resolve it quickly or lean into the bitterness intentionally.			

bVII7 (Bb7 in C)
HARMONY Dual use: Parallel Minor OR Tritone Sub of E7 (V/vi)

Characteristic Shift: **As backdoor → warm float. As tritone sub → darker.**

NOTE	OVER IMAJ7	OVER BVII7 → IMAJ7	OVER BVII7 → AM7
DO	Zone1 Grounded	Zone3 NCT · 9th · Warm float	Zone3 NCT · 9th · Float
SO	Zone1 Open CT	Zone3 NCT · 13th · Color	Zone2 NCT · b13 · Tense color
MI	Zone1 Sweet CT	Zone2 NCT · #11 · Pensive	Zone2 NCT · 11th · Tension
Use when: The backdoor chord. When resolving bVII7 → Imaj7, it's warmer than V7→I and more modal than a tritone sub. All melody notes float or color — nothing avoids. Very singer-friendly.			

bIIImaj7 (Ebmaj7 in C) — "Tonic Imposter"
HARMONY From Parallel Minor — the III major chord of c minor

Characteristic Shift: **Everything shifts toward Eb-major relative feel. Lush and cinematic.**

NOTE	OVER IMAJ7	OVER BIIIMAJ7	SHIFT
DO	Zone1 CT · Root	Zone3 NCT · maj6 · Lush	Grounded → Lush float
MI	Zone1 CT · 3rd · Sweet	Zone1 CT · maj7 · Still warm	Stays stable (different shade)
SO	Zone1 CT · 5th	Zone2 NCT · 9th · Pensive	Open → Lush pensive
TI	Zone2 CT · maj7	Zone2 NCT · b13 · Tension	Leading → Darker tension
Use when: Expansive, cinematic effect. Works beautifully in film scores and neo-soul. Avoid placing bIIImaj7 directly after bVII7 — the listener may hear an accidental modulation to Eb major.			

Lydian II (D or D7 in C) — "The Sunshine Chord"
HARMONY From C Lydian mode — II chord becomes major instead of minor

Characteristic Shift: **Stable notes stay stable. Overall brightness lifts.**

NOTE	OVER V7 (G7)	OVER LYDIAN II (D)	SHIFT
RE	Zone1 CT · 5th of G7	Zone1 CT · Root of D · Even more grounded	Grounded → More grounded
SO	Zone1 CT · Root of G7	Zone3 NCT · 4th of D · Floats up	Anchor → Lifts upward
MI	Zone2 NCT · 13th of G7	Zone1 CT · 9th → warm tension of D	Tense → Brighter float
TI	Zone2 CT · 3rd of G7	Zone3 NCT · 6th/13th of D	Tense-driving → Color
Use when: Pure brightness without any darkness. Great for major-key uplifts — the chorus that suddenly feels sunnier than expected. RE becomes rock-solid here, which is unusual and satisfying.			

Phrygian bIIma**j7** (Dbmaj7 in C)
HARMONY From Phrygian mode — the bII Neapolitan chord

Characteristic Shift: **Everything gets darker and more exotic. Half-step tension above tonic.**

NOTE	OVER IMAJ7	OVER BIIMAJ7	SHIFT
DO	Zone1 CT · Root · Grounded	Zone4 NCT · maj7 · Bitter half-step	Zone 1 → Zone 4 — dramatic
MI	Zone1 CT · 3rd · Sweet	Zone2 NCT · 3rd-tension · Tense-exotic	Sweet → Tense exotic
SO	Zone1 CT · 5th · Open	Zone2 NCT · #11 · Lydian tension	Open → Pensive exotic
TI	Zone2 CT · maj7	Zone3 NCT · major 9th color	Leading → Floating
Use when: Dramatic impact and dark color — flamenco, cinematic, or metal influence. The half-step relationship creates maximum tension. DO becomes genuinely dangerous here. Use briefly and resolve with conviction.
